

JRA JUNK REMOVAL MASTERCLASS SERIES · EPISODE 1

The LSA Migration

What Changes, What You Lose, What To Do
as a Junk Removal Business Owner

Lee Godbold · Junk Removal Authority

Live Tuesday, August 4, 2026 · 2:30 PM ET

Google is moving your Local Services Ads

14 days

Email notice that your account is moving.

7 days

A single reminder. Then it happens.

1 task

The one job that only works before the move.

You do not pick the date. On migration day the old dashboard locks and your campaign is already running inside Google Ads.

Your reporting history does not come with you.

Everything else can be handled after the move. That one cannot. It is the reason this class is happening today and not in three weeks.

As of August 2026. Verify against the notice in your own account.

What you will walk away with

1

What the migration actually changes

And the parts everyone panics about that are not changing at all.

2

Whether junk removal is in the first wave

It is on the August list. What that does and does not tell you about your own account.

3

The one export that only works before your date

What to pull, where to put it, and why it matters after the fact.

4

The credit rule that just made two common bad leads non refundable

This is the slide that changes how you spend money. If you only remember one thing, remember this one.

5

What still drives ranking and cost after the move

Reviews, speed, job types, service area, and what you do with the lead once it rings.

1

What is happening

The standalone dashboard is retired. Your campaign becomes a Google Ads campaign.

The standalone LSA dashboard is being retired

TODAY

A separate product

You log in to a Local Services Ads dashboard that is not Google Ads. Its own inbox, its own budget screen, its own reports.

AFTER YOUR DATE

A campaign inside Google Ads

The dashboard locks. Your campaign is already live in Google Ads as a Performance Max campaign with a pay per lead goal.

- ✓ The move is automatic. You are not asked to migrate anything by hand.
- ✓ Nothing Google has published describes an opt out.
- ✓ You do not choose your date. Your notice email does.

As of August 2026. Verify against the notice in your own account.

It becomes Performance Max with a pay per lead goal

01

Cost per valid lead

You are still billed per lead, not per click. The billing model you already know did not change.

02

Search and Maps only

It does not run on YouTube, Display or Gmail. Strictly Search and Maps.

03

Keywordless

No keyword lists, no match types, no negative keyword strategy. Google matches on your categories and job types.

Same money model. New house.

If you understood pay per lead before, you understand pay per lead now. What changed is where you manage it and how much of it you control by hand.

As of August 2026. Verify against the notice in your own account.

This is not the Performance Max people complain about

	Standard Performance Max	Performance Max, pay per lead
How you pay	Cost per click	Cost per valid lead
Where it runs	Search, Display, YouTube, Gmail, Maps	Search and Maps only
Assets required	Heavy: video, images, sitelinks, headlines	Simplified. No video or sitelinks required
Keywords	Keywordless, broad audience matching	Keywordless, matched on categories and job types

When somebody tells you Performance Max burned their budget on YouTube views, they are talking about the left column. You are getting the right column.

As of August 2026. Verify against the notice in your own account.

What does not change

THE MODEL

How you pay and where you show

You still pay per qualified lead: calls, messages and bookings, not per click.

You still appear on Google Search and Google Maps.

The campaign is still keywordless.

COMES WITH YOU

Your history and your badge

Past customer lead history transfers automatically: customer contact details, back and forth message history, and older call recordings. It stays fully accessible in Lead Manager.

Your verified status and Google Verified badge carry over automatically.

This is an infrastructure change, not the end of Local Services Ads.

The product still works the way it worked. The building it lives in is different.

As of August 2026. Verify against the notice in your own account.

2

When it hits you

Three phases, one August list, and the only document that knows your date.

Google published three phases

PHASE 1

August 2026

First US verticals, including Home Services. Plumbing, HVAC, Roofing and Junk Removal are on this list.

PHASE 2

Late 2026

Service area businesses without physical storefronts, professional services, and accounts with custom bidding or booking configurations.

PHASE 3

2027

Non US markets, healthcare, and accounts with advanced verification requirements.

The phases describe categories and account types. They do not name your account.

Your notice email is the only account specific information that exists. Nobody outside Google knows your order.

As of August 2026. Verify against the notice in your own account.

Junk Removal is on the August list

Junk Removal appears in the Phase 1, August 2026 table under Home Services.

It is listed alongside Plumbing, HVAC and Roofing. Our category is not waiting until 2027. It is in the first wave.

WHAT THIS TELLS YOU

The category is live in August.

Plan on the assumption that this is happening to junk removal companies right now, this month.

WHAT IT DOES NOT TELL YOU

Your specific date.

Category listed does not mean every account in that category moves in the same wave. Next slide explains why.

As of August 2026. Verify against the notice in your own account.

Storefront or service area likely decides your date

PHASE 1, AUGUST 2026

Category listed

Home Services, including Junk Removal.

If your account is set up around a physical storefront location, you are squarely in the first wave.

PHASE 2, LATE 2026

Service area businesses without physical storefronts

Also professional services and accounts with custom bidding or booking configurations.

Most junk removal companies are service area businesses.

So assume it could be you, and act now.

Doing the prep early costs you an hour. Being caught without it costs you your reporting history permanently. The definitive answer is the notice email in your own account, not this slide and not your competitor's experience.

As of August 2026. Verify against the notice in your own account.

The notice sequence, and the two weeks after

1

Day 0

Email notice

Google emails the account. This is the start of your clock, about 14 days out.

2

Day 7

Reminder

One reminder email. If nobody reads the account inbox, you burn the whole window.

3

Migration day

It moves

The old dashboard locks. Your Google Ads campaign is already active.

4

Two weeks after

Noise

Give it up to two weeks to stabilize before you judge anything.

Make sure the account email is one a human reads every day.

If notices route to an old address or to somebody who left the company, the fourteen days pass without you.

As of August 2026. Verify against the notice in your own account.

3

Do this now

The work that only counts if you do it before your migration date.

Your customer list comes with you. Your scoreboard does not.

TRANSFERS AUTOMATICALLY

Lead history

Customer contact details

Back and forth message history

Older call recordings

Verified status and the Google Verified badge

All of it stays fully accessible inside the new Lead Manager.

DOES NOT TRANSFER

Campaign performance

Past impressions

Clicks

Weekly spend history

Ad level performance reports

Google is explicit: download or export your data from the original dashboard before migrating.

You keep the customers. You lose the record of what they cost you.

Which means you lose your only baseline for judging whether the new system is doing better or worse.

As of August 2026. Verify against the notice in your own account.

If Google expected your leads to get cheaper, they would have kept your history.

That is my read, and I want to be clear that it is a read. Google has not said anything about what your cost per lead will do, and neither will I. Nobody can tell you that number. What I can tell you is that you are about to lose the only baseline you had for measuring it, which is exactly why the export matters this week.

Export this week. Not on notice day.

PULL ALL OF IT, WIDEST DATE RANGE AVAILABLE

What to export

Leads, with dates and outcomes

Charges and spend

Budget history

Performance broken out by service category

Anything else the dashboard will hand you

Save it off Google.

A named folder in your Drive, or on your own machine. Not your downloads folder.

Menu names change.

If a label does not match what you expect, look for the report or download icon and take everything you can.

If an outside agency runs your LSAs, ask them in writing this week for the export and for what your access looks like after migration.

As of August 2026. Verify against the notice in your own account.

The honest problem with the export

THE HONEST PART

Lead data exports fine. Performance data is the hard part.

As of the day I built this class, I have not found a clean, easy way for a do it yourself owner to export the performance history out of the Local Services dashboard. I would rather tell you that than pretend there is a tidy button.

IF YOU ARE A JRA CLIENT

We can pull it for you.

If your LSA account is connected to your Google Ads account, we have software that can pull it for you.

IF YOU ARE DOING IT YOURSELF

Screenshot it and let an AI build the sheet.

Screenshot the reports, feed them into an AI, and have it build you a spreadsheet. It is not elegant and it works.

How far back: roughly 18 months. If you are screenshotting, go back to January of last year so you end up with a full seasonal cycle and a real year over year comparison.

When: start the day you get your migration notice. Do not wait until the final day, in case something goes wrong.

I am still looking for a better way. If I find one, I will publish it.

As of August 2026. Verify against the notice in your own account.

Screenshot your settings

You cannot verify after migration what you never wrote down.

✓ Budget

✓ Target CPA by category

✓ Categories and job types

✓ Service areas

✓ Schedule and hours

✓ Phone routing

✓ Photos on the profile

✓ Callouts

✓ Who has access, at what level

Take the access list too. It is the one nobody thinks of and the one that causes Monday morning chaos.

As of August 2026. Verify against the notice in your own account.

4

What changes in how you run it

Bidding, budget, inbox, callouts, and the profile feeding your ad.

Manual bidding is gone. Target CPA is a goal, not a ceiling.

WHAT PEOPLE THINK THEY SET

A ceiling

A maximum. A number Google is not allowed to go past. If it goes past, something is broken and you get money back.

WHAT THEY ACTUALLY SET

An average to aim at

Google aims at it over time. Individual leads land above and below. There is no refund when it misses.

Set it from your numbers, not from a feeling.

Write down your real cost per lead and your close rate by service type before you pick a target. Automated bidding is now the main lever you actually own, so the number you feed it matters more than it used to.

As of August 2026. Verify against the notice in your own account.

Automation needs roughly 30 leads a month to learn

30

conversions in about 30 days is the widely used learning floor for Target CPA bidding.

1 = 1

In pay per lead, every lead is a conversion. So the floor is roughly 30 leads a month.

Under it

Expect drift and volatility. Do not panic tune, and do not split what little volume you have.

Doing the arithmetic out loud, with a made up number

If a lead cost you about 70 dollars, 30 leads a month is roughly 2,000 dollars a month in spend. That 70 is an illustration so you can see the shape of the math. It is not a prediction of your cost, and I am not going to give you one.

As of August 2026. Verify against the notice in your own account.

Budget converts from weekly to daily. Do the arithmetic.

Historical weekly budget

weekly $\div 7$ = daily average

daily $\times 30.4$ = maximum monthly

Example: 700 a week becomes 100 a day, which can spend up to about 3,040 in a month.

That is about 4.34 times your weekly number, not 4 times.

The gap is small on paper and real in your bank account. Check it in week one instead of assuming it landed where you wanted.

You no longer have a weekly budget absorbing the spikes.

Junk removal demand is spiky: weekends, weather, end of month moves. And budget adequacy affects delivery. If you exhaust the daily budget by noon, you are invisible for the rest of the day.

As of August 2026. Verify against the notice in your own account.

One target now covers every category you run

JUNK REMOVAL ONLY

Barely affects you

Junk removal is one category. If that is all you run, losing the vertical level target costs you almost nothing. One campaign, one category, one target.

JUNK PLUS A MOVING SERVICE

This is where it bites

Vertical level Target CPA is gone. One campaign level target now blends categories whose leads are worth very different money to you.

BEFORE YOU TAKE THE OBVIOUS ADVICE

You cannot create new pay per lead campaigns inside Google Ads.

Google directs advertisers to g.co/localservices for additional campaign setup. So just split them into separate campaigns is not a simple in platform action, and anyone telling you it is has not tried it. If your categories have very different lead economics, plan on that being a conversation with Google, not a checkbox.

As of August 2026. Verify against the notice in your own account.

Two smaller changes worth knowing

CHANGE ONE

Your lead inbox moves.

Find it under Goals, then Conversions, then Leads. Nobody finds that by accident.

Make sure whoever answers your leads still has access, because the person running ads and the person answering the phone may now need separate permissions.

CHANGE TWO

BBB callouts are discontinued.

Replace them with structured callouts such as business hours, specialties, and payment methods.

Do both in the week you migrate. Test lead access on a real phone, and open the callout options instead of taking whatever defaulted in.

As of August 2026. Verify against the notice in your own account.

Your Business Profile now feeds your paid ad

Syncs automatically

Name, address and hours come straight from your Google Business Profile. Change it there, it changes in the ad.

Can pause your campaign

Major name or address changes trigger a verification review that can pause the campaign for 24 to 48 hours. Do not make those edits in a busy week.

Customizable for ads

Photos and service areas are pre populated from the profile but can be customized independently for the ads. You can run LSA specific photos without touching your organic listing.

Clean up the profile before you migrate, not after. Name, phone, hours, service area, categories, photos.

As of August 2026. Verify against the notice in your own account.

5

What actually drives results

After the move, this is the list that decides what you pay and how often you show.

Your LSA reviews already moved into your Business Profile

SINCE JULY 11, 2025

All LSA reviews are managed through the Google Business Profile

Old LSA review request links are dead. If you are still sending one, you are sending customers nowhere.

SINCE NOVEMBER 2024

A linked, verified profile is required to run LSAs at all

Incomplete, unverified or suspended means the ads do not run. Not rank poorly. Do not run.

Your Business Profile rating, review volume and engagement feed your LSA ranking.

Which means the review engine you build for the map pack is the same review engine that lowers what you pay for paid leads. Fix it once, it pays twice. That is the whole reason Episode 2 is about the profile.

As of August 2026. Verify against the notice in your own account.

Add LSA specific photos at least once a month

WHY

The buyer is comparing three ads side by side

That is the format. Real photos of your trucks and your crew do conversion work in a way a stock image never will.

AND

A profile untouched for years signals a business not paying attention

Your competitor's ad was updated last week.
Yours has the same four photos from 2022.

Google publishes no photo cadence. This is our practice, not a rule.

And remember from earlier: ad photos can be customized independently of your Business Profile, so you can do this without touching your organic listing.

As of August 2026. Verify against the notice in your own account.

The inputs that decide how often you show

Reviews

Rating, volume and recency, now through your Business Profile.

Budget adequacy

Empty by noon means invisible all afternoon.

Response speed

Google routes the calls and measures you directly.

What you do with the lead

Booking it and declining it are not the same signal.

Job types enabled

What you say you do decides what you are shown for.

Profile completeness

Blanks cost you. Fill everything in.

Business hours

Hours you keep, not hours you wish you kept.

Proximity

How close you are to the person searching.

None of these are new. What is new is that you will be looking for them in a different interface.

If somebody tells you a number Google never published, ask them where it came from.

As of August 2026. Verify against the notice in your own account.

Google times you, and there is no published bar

HOW IT IS MEASURED

Google owns the phone number

Calls route through Google's own numbers, which means Google is not estimating your answer rate or your speed. It is measuring them directly, on every call.

WHAT YOU WILL HEAR ONLINE

Answer in five minutes. Stay under five percent.

Those are agency estimates. Google has published no response time threshold. Say practitioners observe, never say Google requires.

It is comparative, not a fixed bar.

You are not being graded against a number. You are being graded against the other junk removal companies bidding in your market this week. Fast enough last year can be slow this year without anything changing on your end.

As of August 2026. Verify against the notice in your own account.

Declining work costs you twice

COST ONE

You already paid for it

The charge happened when the lead came in.
Turning the job down does not undo the charge.

COST TWO

It counts against you

Google analyzes the calls it routes. Repeatedly declining work reads as disinterest and reduces how often you are shown.

Credits are for invalid leads. They are not for leads you did not want.

If you keep saying no to work you are enabled for, the fix is not disputing it. The fix is changing what you are enabled for. That is the next two slides.

As of August 2026. Verify against the notice in your own account.

If a machine answers, it has to do the job

COUNTS

Actively engages, qualifies and books, or transfers live to a human

That produces the outcome Google is measuring: a caller who got handled.

DOES NOT COUNT

Voicemail, or a message taker that promises a callback

The phone technically got picked up. Nothing happened. That is not the outcome being measured.

OPS TIP

You can ask Google to switch your LSA forwarding number.

Point it at a number where the AI answers within one to two rings. At JRA we run Jenny, our junk removal AI agent, on exactly this setup. I am not going to spend the class on it, but I will show you the whole stack in a few minutes.

As of August 2026. Verify against the notice in your own account.

Manual lead disputes are gone. Rate the lead instead.

DEPRECATED JULY 2024

Filing disputes

The manual dispute process you may remember is not the system anymore. Stop building a workflow around it, and stop paying anyone to run one for you.

WHAT REPLACED IT

Automated credits

Leads are screened at contact, and charged leads are reassessed over time. Invalid or low quality leads are not charged. Credits show up in your account balance within 30 days.

YOUR REMAINING LEVER

Rate this lead. Every time. Every bad lead.

Google says the lead feedback survey can produce additional credits. It costs your office person ten seconds. Expect the original charge to still appear on the invoice even when a credit is issued, so reconcile against the balance, not the invoice line.

As of August 2026. Verify against the notice in your own account.

Rated. Credited. This is the feedback survey doing its job.

Two of your most common bad leads are no longer refundable

Job type not serviced

No longer credited.

Geography not serviced

No longer credited.

Google's own remedy is to fix your settings, not to ask for money back.

Proactively refine your service areas, your job types and your categories, and accept lower volume in exchange for leads you actually want. Healthcare, tax specialists and EMEA advertisers are also excluded from credits.

Pruning is now your primary cost control. Every job type you leave on is a bill you agreed to pay.

As of August 2026. Verify against the notice in your own account.

This is the screen where you fix it. Four of ten services on, Other switched off.

What my own account actually looks like

One junk removal account, Jul 6 to Aug 4, 2026.

As of August 2026. Verify against the notice in your own account.

\$40.18 per lead

\$2,008.95 across 50 charged leads.

Top 92.29 percent. Absolute top 19.65 percent.

Top impression rate means we appear above the organic results almost every time. Absolute top means we are the very first ad about one time in five. That gap is the remaining upside.

Zero message leads. Zero message spend.

Message leads are switched off, so none of that money went to text conversations.

Do not pause. Throttle.

Pausing restarts learning

A paused campaign does not pick up where it left off. You pay the learning period twice.

The 20 percent rule

Never change budget or target more than 20 percent up or down at once. That is my rule, not Google's.

Two weeks after migration

Let it stabilize before you judge it. The most expensive thing you can do in week one is panic tune a system that is still settling.

If you have to slow spending, lower the budget in steps. Do not switch the campaign off.

Slow is recoverable. Off is a restart.

As of August 2026. Verify against the notice in your own account.

Who wins and who loses on this change

WINS

The disciplined operator

A real review engine running through the Business Profile

Phones answered fast, every time, including nights and weekends

Job types and service area set to the work they actually want

Enough lead volume to feed the automation

The patience to leave it alone for two weeks

LOSES

The volume chaser

Thin, unverified or neglected Business Profile

Calls to voicemail, callbacks tomorrow

Every job type switched on and the service area drawn wide, now with no credit path

Too little volume for the bidding to learn

Panic tuning in week one

ONE WARNING IF YOU MANAGE IT YOURSELF

After migration you are standing inside the platform where Google sells advertising, and the reps will call. Get moved into click based campaigns and you lose lead credits entirely, because those only exist when you pay per lead.

As of August 2026. Verify against the notice in your own account.

The checklist

Before your notice

- Export everything, widest date range, saved off Google
- Screenshot every setting, including who has access
- Confirm the account email is read daily
- Give each lead handler their own Google Ads access
- Write down real cost per lead and close rate by service
- Clean up the Business Profile
- Prune job types and service area to the work you want

When the notice arrives

- Read the notice. It is the only account specific source
- Run the export again to capture the final weeks
- Fresh settings screenshots dated that week
- Tell the team the inbox is moving, test their logins
- Decide your Target CPA calmly, from your numbers
- Block 30 minutes the week after to verify

After you migrate

- Verify every setting against your screenshots
- Check the daily budget times 30.4 against intended monthly
- Find Lead Manager, confirm leads are landing
- Choose callouts deliberately, BBB is gone
- Rate every bad lead, every time
- Leave it alone up to two weeks
- Then review weekly: pacing and answer rate together

As of August 2026. Verify against the notice in your own account.

Everything I just showed you is three jobs, not one.

1

The profile, right

Verified, complete, reviews coming in steadily, photos that look like a real company.

2

The LSA, pruned and watched

Job types and service area tight, budget and target sane, every bad lead rated, nobody panic tuning.

3

The phone, answered fast

Every call, first ring, nights and weekends, engaged and booked or handed to a human.

Most owners do one of these well. Almost nobody does all three, every month, for months.

What these cost separately

Google Business Profile management

One profile, managed

\$750 / mo

Jenny

The industry's best trained junk removal AI agent

\$750 / mo

LSA management

Settings, pruning, lead rating, pacing

\$500 / mo

All three, bought separately

\$2,000 / mo

FOR THE NEXT 10 PEOPLE

Business Profile, LSAs, and Jenny answering every call

\$750 per month, locked for six months

After the sixth payment it goes to \$1,000 per month.

One company per market

We cannot rank two junk removal companies in the same market. Taking you means turning your competitors away.

No ranking guarantees

Anyone promising you position one is lying, and Google says the same thing.

No money back guarantee

I am not offering one on this price. You are getting the discount instead.

How to claim one of the ten

This class also goes out to JRA's 10,000 YouTube subscribers, so a lot more people are going to see this than are on the call right now. Ten spots, first come.

Drop a message in the comments right now

If you are live with me, put it in the chat. If you are watching the replay, put it in the comments.

Or text Shane

907-982-8460

Tell him you came from the LSA Migration class.

Ten spots. One company per market. First come.

NEXT CLASS · EPISODE 2

Own the Map

Tuesday, August 18, 2026 · 2:30 PM ET

Your Business Profile is the foundation under both map ranking and paid leads.

Reviews moved into it. Your ad's business details sync from it. It has been required to run LSAs at all since November 2024. Fix it once, it pays twice.

Register once for the whole series at masterclass.junkra.com

Questions

Can I opt out?

Nothing Google has published describes an opt out. Plan on it happening.

Do I keep my Google Verified badge?

Yes. Verified status and the badge carry over automatically.

Do I need a Google Ads account?

Yes. That is where the campaign and Lead Manager live. Get everyone their own access.

Will my cost per lead go up?

Unknown, and I will not guess. Watch your target, your daily pacing and your answer rate.

As of August 2026. Verify against the notice in your own account.
